EDUCATION

Kennesaw State University

B.S. in Software Engineering

Kennesaw, Georgia

May 2026

Dean's List | Relevant Coursework: Object-Oriented Programming, Data Structures, Data Analysis, Relational Databases, Unit Testing

EXPERIENCE

AI Trainer – Software Engineering / Coding Domain

January 2026 – Present

Handshake AI Fellowship

- Evaluated and scored responses from frontier LLMs on multi-turn software engineering and coding tasks, applying a structured 1–7 rubric across technical clarity, communication style, and collaborative adaptability.
- Authored detailed written rationales for each score and performed comparative preference evaluations across multiple candidate responses to the same coding prompt.
- Passed a rigorous calibration screening and maintained high inter-rater agreement, contributing to production-quality human-feedback data used to improve AI coding assistants.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, HTML, CSS, R

Frameworks & Libraries: Spring Boot, Node.js, JUnit, RESTful APIs, React

DevOps & Cloud: Docker, Kubernetes, Helm, ArgoCD, GitHub Actions, AWS Lambda, Trivy, Railway

Observability & Databases: Prometheus, Grafana, PostgreSQL, RStudio

AI Tools: GitHub Copilot, Claude, Claude API, Cursor

Tools & IDEs: IntelliJ IDEA, VS Code, Git, Postman, MS Office Suite

PROJECTS

Job Tracker – Full-Stack Job Application Tracker

2026

Java, Spring Boot, PostgreSQL, React, Docker, Claude API

- Built a full-stack job application tracker with a Java/Spring Boot REST API and PostgreSQL backend, and a React (Vite) frontend supporting complete create, read, update, and delete functionality with client-side routing.
- Integrated the Claude API through a dedicated Spring Boot endpoint to compare an uploaded resume against pasted job descriptions and surface structured match and gap analysis.
- Containerized the application with Docker and deployed it to Railway with a public, live-accessible URL.

Kubernetes Enterprise Capstone – Microservices Platform

Capstone Project | Kubernetes, Docker, Helm, ArgoCD, GitHub Actions, Prometheus, Grafana, Trivy

- Deployed a production-grade Kubernetes cluster via Docker hosting 3 microservices (frontend, backend, worker), configuring Namespaces, ResourceQuotas, and pod scheduling with taints and tolerations.
- Implemented RBAC with least-privilege ServiceAccounts and applied NetworkPolicies and Pod Security Standards to harden cluster security posture.
- Built a GitOps CI/CD pipeline using ArgoCD and GitHub Actions with Helm chart packaging for versioned zero-downtime rolling deployments; integrated Trivy image scanning and Prometheus/Grafana observability dashboards.

Fiscal Tracker – Accounting Web Application

Team Project | JavaScript, AWS Lambda, RESTful APIs, Role-Based Access Control

- Built a full-stack financial management app using Agile methodologies with a role-based admin dashboard supporting 3 user roles (Administrator, Manager, Accountant), featuring real-time ratio calculations (Current Ratio, ROA, ROE) and event logging via AWS Lambda and RESTful APIs.
- Implemented granular user management with role permissions, suspension scheduling, and automated email notifications for account changes.

ACTIVITIES & LEADERSHIP

Kennesaw Youth Basketball League

Nov 2023 – Feb 2024

Head Coach | Kennesaw, Georgia

- Led a team of 8 athletes (ages 10–12) through a full competitive season, developing coaching, communication, and leadership skills on and off the court.
